PROFESSIONAL SUMMARY

Detail-oriented Electrical and Electronics Engineering graduate with strong analytical, mathematical, and problem-solving foundations applied to Data Engineering and Data Analytics. Proficient in writing and tuning complex SQL queries across MySQL, SQL Server, and PostgreSQL, as well as constructing end-to-end Python data pipelines for automated ingestion, cleansing, and transformation. Hands-on experience building interactive dashboards in Power BI and Streamlit to translate structured datasets into actionable business insights.

TECHNICAL & CORE COMPETENCIES

Data & Databases:	SQL (Query Tuning, Joins, Subqueries, Aggregations), MySQL, SQL Server, PostgreSQL, SQL Workbench, Data Modeling
Data Engineering:	End-to-End Data Pipelines (ETL/ELT), Data Ingestion & Transformation, Data Cleansing, Data Quality Auditing, Schema Design
Programming & Tools:	Python (Pandas, NumPy), Streamlit, Git, GitHub, Jupyter Notebook, VS Code
Reporting & Analytics:	Power BI (DAX, KPI Dashboards, Dynamic Filtering), Advanced Excel (Pivot Tables, VLOOKUP, Power Query)
Applied AI & Soft Skills:	AI-Assisted Workflows (Prompt Engineering for Query Generation & Debugging), Technical Documentation, Critical Thinking

TECHNICAL DATA PROJECTS

Electricity Consumption & Bill Default Risk Pipeline | GitHub Repository | Live App — 10/2024

- Designed and executed an end-to-end Python (Pandas) data ingestion pipeline processing 10,000+ billing records to clean missing entries and standardize schema structures.
- Wrote and optimized MySQL aggregations to evaluate customer payment histories, identifying early bill default risk indicators across 18% of overdue revenue.
- Built and deployed an interactive Streamlit web application providing stakeholders real-time default risk assessment and metric breakdowns.

Electric Vehicle Market Analysis & ETL Workflow (India) | GitHub Repository | Live Dashboard — 07/2024

- Engineered a data preparation workflow in Python (NumPy/Pandas) and SQL Server to aggregate multi-source sales records across 28 states into a unified star-schema database.
- Formulated 12+ custom DAX measures in Power BI to analyze Total Sales, YoY Growth, and Penetration Rates across 2-Wheeler and 4-Wheeler categories.
- Delivered a detailed market report highlighting regional sales trends and identifying top-performing market segments for strategic decision-making.

Retail Sales Performance & Customer Segmentation Model | GitHub Repository | Live Report — 03/2024

- Developed an automated RFM (Recency, Frequency, Monetary) customer segmentation script in Python on 5,000+ transaction records to classify customer purchasing behavior.
- Created a dynamic Excel data model using Power Query and interactive pivot tables, reducing recurring metric reporting cycles significantly.

EDUCATION

B.Tech in Electrical and Electronics Engineering — 08/2022 – 05/2025
Baba Institute of Technology and Sciences, Visakhapatnam

Diploma in Electrical and Electronics Engineering — 06/2019 – 04/2022
Government Polytechnic College, Paravathipuram
